SUMMARY

Backend engineer with six years of experience, focused on fintech infrastructure: double-entry ledgers, payment integrations and identity verification. I build systems that are correct under retries and failure, easy to test, and simple to extend with new providers.

EXPERIENCE

Afrinvest West Africa

August 2022 – Present

Backend Engineer

Lagos, Nigeria

- Built backend services for [Plutus Neo](#), a consumer investment platform for wallet funding, structured savings, automated investing and US stock trading through DriveWealth, including onboarding and Good Faith Violation checks.
- Designed idempotent wallet-to-wallet transfers on a double-entry ledger, with atomic debit and credit postings in kobo, so client retries can never post a transfer twice.
- Built a multi-tenant Know Your Customer (KYC) service with one provider-agnostic interface for BVN, NIN and liveness checks, tenant-defined verification tiers, and two-person approval for provider switches.
- Applied the Strategy Pattern to separate funding-source logic from transaction processing, improving maintainability by about 30% and letting new payment providers plug in without changes to core services.
- Reduced production bugs by **35%** with unit and integration tests and code review enforced through GitHub pull requests.
- Cut incident resolution time by **40%** with structured logging and monitoring, improving platform uptime.
- Optimised database schema and indexing to reduce peak-time query latency as user demand grew.

IJGB

May 2025 – July 2025

Backend Engineer

Lagos, Nigeria

- Designed and deployed low-latency REST APIs with the frontend team, cutting data loading time by **30%** through API batching and optimised state management.
- Documented APIs with Swagger/OpenAPI, shortening onboarding time for new developers.
- Fixed high-priority bugs and refactored legacy code, reducing application crash reports by **40%**.
- Wrote unit and integration tests and followed best practices in API design and database management.

TechTrend Africa

May 2021 – July 2022

Software Engineer

United Kingdom

- Analysed customer datasets to ensure full adherence to reporting compliance standards and financial regulations, reducing legal risk and improving data transparency.
- Worked with project managers to define technical roadmaps and estimates, delivering high-priority features in Agile sprints against tight deadlines.
- Automated core service workflows, reducing manual intervention by about **40%** and improving the scalability of customer-facing services.

Renager Ltd

March 2020 – April 2021

Software Engineer

Ibadan, Nigeria

- Translated business requirements into technical designs and scripted deployment plans that reduced human error and deployment time.
- Wrote runbooks and automated scripts for handling system anomalies, enabling fast recovery across backend services.
- Standardised architecture and platform configuration across development, staging and production environments.

PROJECTS

Laravel DTO Mapper (open source) | github.com/Sinmiloluwa/laravel-dto-mapper

- Lightweight, zero-config PHP library that maps loosely typed data (Eloquent models, API responses, request arrays) into strict, typed DTOs using PHP 8 attributes, removing boilerplate and protecting data integrity across layers.

Social Todo List | github.com/Sinmiloluwa/social-todo-list

- Social productivity platform with synchronised task management, social discovery and real-time collaboration through shared "Accountability Circles."

Social Voice App | github.com/Sinmiloluwa/voice-app

- Voice-driven Flutter app with real-time voice input, intent processing and response workflows, built for performance, accessibility and reliability.

TECHNICAL SKILLS

Languages: PHP, JavaScript, Dart, Python, HTML, CSS

Frameworks: Laravel, Node.js, NestJS, Express, Flutter

Backend: REST APIs, system design, caching, double-entry ledgers, payment integrations (Paystack, Stripe Connect, DriveWealth), KYC

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, GitHub Actions, CI/CD

EDUCATION

University of Ibadan, Nigeria

2021

Bachelor of Science in Wood Products Engineering
